Petroleum Crude Oil

Main Hazards:

· HIGHLY FLAMMABLE: Will be easily ignitied by heat, sparks or

Notes:

- Vapours may form explosive mixtures with air.
- Vapours may travel to source of ignition and flash back.
- Most vapours are heavier than air. They will spread along ground and collect in low or confined areas (sewers, basements and tanks).
- Vapour explosion hazard indoors, outdoors or in sewers.
- Runoff to sewer may create fire or explosion hazard.
- · Containers may explode when heated.
- · Many liquids are lighter than water.
- Product may be transported hot.

Health

- Inhalation or contact with material may irritate or burn skin and
- Fire may produce irritating, corrosive and/or toxic gases.
- Vapours may cause dizziness or suffocation.
- Runoff from fire control or dilution water may cause polution.

Public Safety

- CALL EMERGENCY RESPONSE at the phone numbers listed at the front of this brochure.
- As an immediate precautionary measure, isolate spill or leak area for atleast 50 meters (150 feet) in all directions.
- Keep unauthorized personnel away.
- Stay upwind, uphill and/or upstream.
- Ventilate closed spaces before entering. Summarized from 2016 Emergency Response Guide

Emergency Planning Zone

The AER defines an Emergency Planning Zone (EPZ) as a geographical area surrounding a well, pipeline, or facility containing hazardous product that requires specific emergency response planning by the licensee.

Tilley Station has an assigned facility storage EPZ of 0.8km. This EPZ is a safety measure base on the effects of a possible fire as per Transport Canada's Emergency Response Guide

Tilley Station Information

As part of the public safety process, Inter Pipeline Ltd. (Inter Pipeline) has created this Resident Information Brochure about its Tilley

Station. Inter Pipeline owns and operates the Tilley Station which is part of its Bow River Pipeline. Please review this information as it will

Public Preparedness and Notification

What to do in an emergency

Immediately move away from the area. Travel at right angles to the wind until you can relocate upwind from the gas source.

IF YOU HAVE A TELEPHONE, immediately call the Inter Pipeline emergency phone number listed on this brochure and follow instructions outlined by personnel. You may also call the Alberta Energy Regulator (AER) emergency number listed.

IF YOU DO NOT HAVE A TELEPHONE, As quickly as you can, get to a telephone, call the Inter Pipeline emergency phone number at the phone number listed on this brochure.

Levels of Emergency

ALERT	ON SITE ONLY: Immediate control of the hazard with progressive resolution of the situation.
LEVEL 1	Low Impact: No danger outside the company property.
LEVEL 2	Moderate Impact: Potential exists for the emergency to extend beyond company property.
LEVEL 3	High Impact: Uncontrolled hazard; public safety maybe jeopardized.

Emergency Callout System

The Emergency Callout system is a telephone messaging system used to provide residents with emergency information or instructions. When the phone rings, and is answered, the system will automatically issue an informative message about the situation and on the appropriate public protection measures required. At the end of the message, the following menu options allow the resident

Action	Meaning
Press "1"	Confirm receipt of the message.
Press "2"	Resident requires assistance; a company representative will send someone to the location to assist the resident.
Press "3"	Request a call from a company representative.

If there is no acknowledgement by the resident, the system will continue to call and a company representative will be sent to the residents location.

Shelter - In - Place

Public Protection Measures

Shelter-in-place instructions are often given during the initial assessment and response period. These instructions are given to the public when:

- •There is not enough time or warning to safely evacuate members of the public who may be at risk
- Residents are awaiting evacuation assistance
- During a gas release of limited or controlled duration
- The location of the release has not been identified
- The public would be at higher risk if evacuated

Shelter-in-place is the use of a structure and its indoor atmosphere to temporarily seperate individuals from a hazardous outdoor atmosphere. If asked to shelter-in-place:

- · Immediately gather everyone indoors and stay there
- · Close and lock all windows and outside doors/vents
- If convenient, tape or block the gaps around the exterior door frames
- · Avoid using the telephone, except for emergencies, so that you can be contacted by Inter Pipeline personnel
- Call Inter Pipeline's emergency number provided on the front of the you are experiencing symptoms or smelling sulphur odours
 - you have contacted fire, police or ambulance (so that we can coordinate our response)
- Stay tuned to local radio and television for information updates Even if you see people outside, do not leave until told it is safe to do so
- When it is safe, you will receive an "all-clear" message from Inter Pipeline's emergency callout system

Evacuation

- If you are advised to evacuate please do so immediately. Although you may not appear to be in danger, a shift in wind direction or increased concentrations of gas could change the situation rapidly.
- If there is no answer to our telephone calls, personnel will be dispatched to your residence/business to verify your location and inform you of the situation.
- If you have no means of transportation, or if you require evacuation assistance, Inter Pipeline or local authorities will dispatch a vehicle to assist you.
- A Reception Centre will be established and you will be advised of the location. Proceed to the Reception Centre by the designated route. If you choose to go elsewhere, please indicate this to the person contacting you.

At the Reception Centre, Inter Pipeline representatives will be available to address any questions or concerns.
